

Agentic UX Design Checklist

Agentic Patterns Checklist for Building Better AI Experiences

AI Design Patterns Handbook | © 2026 | For personal use only

An abstract graphic in the bottom right corner consisting of a grid of thin white lines that curve and warp, creating a sense of depth and movement, resembling a wireframe model of a surface.

Agentic UX Audit Checklist

8 patterns • 4 categories • Use during design reviews

✓ = implemented ○ = needs work — = missing

Product: _____ Reviewer: _____ Date: _____ Score: ____/24

CONTROL & PERMISSIONS

Autonomy Spectrum

- ☐ Do new users default to lower autonomy (Level 1—2) before being granted more?
- ☐ Is the current autonomy level always visible somewhere in the UI?
- ☐ Can users adjust autonomy per task type, not just as a global setting?

Intent Preview

- ☐ Are irreversible actions visually distinguished before the agent executes?
- ☐ Can users edit individual steps rather than only approve or reject all?
- ☐ Do previews require explicit user action before dismissing never auto-close?

ESCALATION & TRUST

Escalation Pathways

- ☐ Are low-priority escalations batched rather than sent one at a time?
- ☐ Is full context preserved when the agent escalates no history re-reading?
- ☐ Does the agent learn from resolved escalations and automate repeat answers?

Trust Calibration

- ☐ Does the agent require explicit user consent before increasing its own autonomy?
- ☐ Is trust tracked per domain (e.g. scheduling vs. finance) not as one score?
- ☐ After errors, does the agent show what it learned and what specifically changed?

SCORING GUIDE

- 19—24 Production-ready agent UX
- 13—18 Solid foundation, key gaps to fill
- 7—12 Early stage — trust mechanisms missing
- 0—6 Significant debt — start with core patterns

PLANNING & OVERSIGHT

Plan Summary

- ☐ Does the plan surface assumptions as editable elements before execution?
- ☐ Does the plan update in real-time and flag deviations as they occur?
- ☐ Is there a goal interpretation section showing how the agent read the request?

Action Audit Trail

- ☐ Are completed actions color-coded by reversibility (green / amber / red)?
- ☐ Can users selectively undo individual actions rather than only full rollback?
- ☐ Do document modifications show a diff of exactly what changed?

COLLABORATION & MONITORING

Mixed-Initiative Control

- ☐ Does human input always take precedence over agent activity in real-time?
- ☐ Does the agent run as a background process - never modal or UI-blocking?
- ☐ Are conflicts between human and agent edits surfaced for the human to resolve?

Agent Status & Monitoring

- ☐ Does status display scale to task duration: spinner / panel / full dashboard?
- ☐ Can users check in on agent progress without interrupting its work?
- ☐ Are multiple concurrent tasks aggregated in one readable view - no scrolling?
